

For more than 40 years, Shakespeare has been a leader in fiberglass reinforced composite products and technology. You can depend on Shakespeare's reputation for quality, innovation, and superlative customer service. Shakespeare Composite Structures' Denso-Lite™ shapes are manufactured in U.S.A. and shipped worldwide for applications in a diversity of industries. For custom quality capabilities, cost efficiency, and experience, just call Shakespeare - where innovation and dependability always run true to form.

SOLID ROD STOCK

Millions of longitudinal composite fibers bonded with a polyester resin system for great flexural strength and maximum crush resistance. Color: white.

ROUND TUBES

Mat fibers running "east-west" provide radial integrity, while roving and veil fibers run "north-south" for flexural strength and impact resistance. Polyester resin. Color: white, except gray where noted in chart below.

Thanks to years of research and development, Shakespeare Composite Structure's pultrusion process can be utilized to manufacture almost any continuous profile in solid or tubular form. Products produced by Shakespeare are being extensively employed in the fenestration, electronics, industrial, OEM, recreational, tool handle, fencing, construction and many other markets.

Don't see what you need? Ask about custom pultrusions. We can solve your problems.
